Should I be vaccinated?
Recommendations¹ for Ohio State faculty, staff and students for receiving the measles, mumps and rubella (MMR) vaccine

University officials have been working closely with our on-campus experts in infectious diseases and epidemiology, our colleagues from Columbus Public Health, the Ohio Department of Health and the Centers for Disease Control and Prevention (CDC) to formulate a plan to combat the outbreak and proactively provide the university community with guidance on how to stay as healthy as possible. The flow chart below will help you determine what steps you need to take.

1. Do you have documentation of two doses of MMR? (Healthcare workers may also have a blood test² that shows immunity)
   - YES: No need for additional vaccination
   - NO:
     2. Do you work in a healthcare facility? Are you a post-secondary (college) student? Do you plan to travel internationally?
       - YES:
         3. Do you have documentation of one dose of MMR?
            - YES: Two doses of MMR at least 28 days apart are recommended.
            - NO: One more dose of MMR is recommended.
       - NO:
         4. One dose of MMR is recommended for adults who are not fully vaccinated due to the outbreak.

¹These recommendations have been developed following consultation with the Centers for Disease Control and Prevention (CDC), the Ohio Department of Health and Columbus Public Health.

²A blood test is used to confirm immunity. It is not routinely ordered for patients. However, some healthcare providers may have been tested.
