It would be groundbreaking for the United States if Hillary Clinton were elected, but it would still be following the middle-of-the-road pattern," Paxton said.

“There are conflicting signs as to whether Americans are ready to elect a woman to the White House, but there has been a marked improvement from 20 years ago when there was less than 15 percent of women in Congress,” according to Hughes and Paxton.

"It would be groundbreaking for the United States if Hillary Clinton were elected but it would still be following the middle-of-the-road pattern." Paxton said.

In related news, Moore has been invited to write a blog for DiverseEducation.com, a project of the Kirwan Institute for the Study of Race and Ethnicity, and the Ohio State University. He will focus on topics related to diversity and inclusion in higher education. His work will aim to provide insights and analysis on the current state of diversity and equity in higher education institutions, as well as explore best practices and emerging trends in the field.

**Student Recruitment and Retention**

James L. Moore III, a national expert on black male education, has been appointed assistant director of the South Carolina Research Center on Black Eonomic Development (SCRCBD) at the College of Business at the University of South Carolina in Columbia. Moore has been selected to write a blog for DiverseEducation.com, a project of the Kirwan Institute for the Study of Race and Ethnicity, and the Ohio State University. He will focus on topics related to diversity and inclusion in higher education. His work will aim to provide insights and analysis on the current state of diversity and equity in higher education institutions, as well as explore best practices and emerging trends in the field.

**Academic Programming, Scholarly Activity, and Research**

Robert D. Peterson, Distinguished Professor of Biology at the Ohio State University, has been awarded a National Science Foundation grant to study the genetics of resistance to radiation in the Chinese hamster. The project will focus on understanding the genetic basis of radiation resistance in this species, which has important implications for radiation therapy and cancer research.

**Leadership Recognition**

Ohio State has been named a regional partner in the 2018 Minority MBA Student Competition (MMBC) at the University of Rochester. The College of Business administration has been selected to participate in the MMBC, which is a national competition that focuses on increasing diversity and inclusion in the business world.

**In Sickness and In Wealth**

A recent film screening at the University of Ohio State's College of Social and Behavioral Education (CSE) was held on July 14-16, for the Case Competition IV, presented by Key Bank. The competition featured four teams from the United States, including: Challenges Underrepresented Minority and Majority Students and a team from the University of Hawaii. The competition aimed to address the high rates of African American women who are the first in their family to attend college.

Gregory Williams, the author of the last book, Badly Book Community selection, Lil' on the Color Line: The True Story of a White Boy Who Overcame His Black Fear, spoke to first-year students as part of an ongoing speaker series. Williams' talk focused on his experiences as a biracial student and his journey to becoming a successful author. His talk highlighted the importance of understanding and embracing diversity and inclusion in higher education.

**University of Maryland at College Park.**

an associate professor in the Department of Chemical Engineering at the University of Maryland at College Park. He was honored with the Minority Faculty Award for excellence in mentoring and teaching. His research focuses on understanding the genetic basis of radiation resistance in the Chinese hamster, which has important implications for radiation therapy and cancer research.
