

OUR MISSION: SUSTAINABILITY

We need **bold action** to meet our sustainability goals. That's why we are considering a **partnership** with energy experts that could **propel conservation** efforts while focusing university resources on our **academic mission**.

Here's how a partnership would work to advance sustainability:

OHIO STATE DECIDES ...

Conservation: Require a partner to meet our sustainability goals for energy. (Key goal: 25 percent more efficient within 10 years)

Supply: Choose mix of energy sources, just as we do now. (Fact: 21 percent of our Columbus campus electricity is from renewables)

Operations: Maintain our high service levels through strong performance standards (Fact: Our operations have a 99.96 percent reliability target)

Affinity: Oversee and coordinate any internship, scholarship, research support or other aspects as needed

A PARTNER PERFORMS ...

Conservation: Propose, pay for and implement projects to increase energy efficiency

Supply: Purchase the kind of supply we dictate, using buying power and tools to meet our goals

Operations: Run our utility system with a focus on quality, service and efficiency

Affinity: Provide resources to support students, faculty and staff
